SUBJECT

Online Store & Ordering System

A Shopify online store to sell Ayurvedic medicines and products, with Razorpay for online payments, and a WhatsApp Business channel for community, offers and ordering. Deliveries are handled by your own team.

01

In plain words, what you are buying

Read only this page if you read nothing else. Everything after it is the detail behind these five points.

✓ **Your own online shop.**

A proper website where patients see your medicines, add them to a cart, and pay — on their phone, in two minutes. It is yours, in your name.

✓ **Money reaches your bank directly.**

Payments come in by UPI, card, net banking or wallet through Razorpay, and land in your bank account. JTACS never touches your money.

✓ **Every paid order lands in one dashboard for your delivery team.**

Name, address, phone, items and payment status in one place. Your team prints the packing slip, marks it dispatched, and enters the tracking number — the patient is updated automatically. Your existing delivery arrangement stays exactly as it is.

✓ **A WhatsApp channel for your patients.**

A community they can join for updates and offers, plus automatic WhatsApp messages when their order is confirmed, shipped and delivered — and the option

to order straight from WhatsApp.

✓ **One bill from us, and clear information on everyone else's bills.**

JTACS charges you a one-time fee to build all of this. Shopify, Razorpay and WhatsApp charge you separately, directly, at their own published rates.

We add no commission on top of them.

The short version of the money. JTACS charges **₹36,000**, one time, to build and launch everything. There is no tax added on top of that and nothing further to pay us for the build. To start the store you will also pay roughly **₹24,400** to Shopify, WhatsApp and the domain provider in the first month. After that, expect around **₹10,200 per month** in running costs at 100 orders a month, paid directly to those companies. Section 07 shows every rupee.

02

Scope of work — what JTACS will build

Fixed scope, fixed price. Anything outside this list is quoted separately before we start it, never billed as a surprise.

A · THE ONLINE STORE

- ❑ **Shopify store setup** on your own domain (for example `didhanushayurveda.in`), configured for India: INR pricing, GST-compliant invoices, Indian address formats and pin-code based shipping.
- ❑ **Custom-designed storefront** — homepage, shop, product pages, About the Doctor, Consultation enquiry, Contact, plus the legally required pages (Terms, Privacy, Shipping Policy, Refund & Return Policy).
- ❑ **Mobile-first design.** Over 80% of your patients will open the site on a phone. It is designed for the phone first and the laptop second.
- ❑ **Product catalogue loaded — up to 30 products** with photographs, descriptions, ingredients, dosage notes, MRP, stock counts and category grouping (for example: Digestion, Joint Care, Skin, Immunity, Oils, Churnas).
- ❑ **Search, filters and related-product suggestions** so a patient looking for one medicine discovers three more.

B · PAYMENTS, ORDER HANDLING AND WHATSAPP

- ❑ **Razorpay payment gateway** — account opening support, KYC document preparation, integration, live test transactions, and settlement to your bank account. **Prepaid only** — every order is paid for before it leaves you. Cash on Delivery is not offered.
- ❑ **Order management for your delivery team** — a single dashboard of paid orders with name, address, phone and items; printable packing slips; a dispatch button; and a field to enter your tracking or docket number so the patient is notified automatically. Built to fit the delivery arrangement you already have, whoever you use.
- ❑ **WhatsApp Business setup** — verified business profile, product catalogue inside WhatsApp, a Community your patients can join, and automatic order-update

messages. Full detail in Section 07.

C · LAUNCH AND HANDOVER

- ❑ **Google Analytics and Search Console** connected, so you can see how many people visited and what they bought.
- ❑ **Basic SEO** — page titles, descriptions, product schema and a Google Business Profile, so people searching for an Ayurvedic doctor in your city can find you.
- ❑ **End-to-end testing.** We place real test orders ourselves — pay, ship, track, refund — before you go live.
- ❑ **One training session (90 minutes)** for you and your staff: adding a product, seeing an order, printing a label, issuing a refund. Recorded, so you can watch it again.
- ❑ **30 days of free defect support** after go-live. If something we built does not work, we fix it at no charge.

D · NOT INCLUDED IN THIS PRICE

Product photography and videography · logo and brand identity design (if you do not have one) · content writing beyond your supplied product text · paid advertising and its ad spend · mobile apps for Android/iOS · doctor consultation video calls · subscription/refill ordering · regional-language versions of the store. Each of these is available and quoted separately whenever you want it.

03

JTACS charges PAYABLE TO US

This is the one-time fee for building, integrating, testing and launching everything described in Section 02. It is the only invoice you will receive from JTACS for the build.

PROFORMA INVOICE — ONE-TIME WEBSITE AND SYSTEMS BUILD		
#	DESCRIPTION OF SERVICE	AMOUNT (₹)
1	Store design & development — Shopify setup, custom storefront design, up to 8 pages, mobile-first build, domain and email configuration	14,000
2	Product catalogue setup — up to 30 products with images, descriptions, pricing, stock, categories, search and filters	6,000
3	Razorpay payment integration — account and KYC support, gateway integration, UPI / cards / net banking / wallets, live testing, settlement setup	5,000
4	Order management & dispatch workflow — order dashboard for your team, packing slips, dispatch marking, tracking-number entry, and the returns and refund process	4,000
5	WhatsApp Business setup — verified profile, catalogue, Community structure, opt-in flow, order-update message templates, broadcast setup	5,000
6	Compliance, launch & training — legal pages, GST invoice configuration, SEO basics, analytics, end-to-end testing, go-live and staff training	2,000
Total payable to JTACS		36,000

Rupees Thirty-Six Thousand Only. This is a flat fee with no tax added on top and nothing further to pay for the build.

Important — what this ₹36,000 does not cover. Shopify's subscription, Razorpay's transaction fees and WhatsApp message costs are **not** included here and are **not** billed by JTACS. You pay those companies directly, from your own account, at their published rates. Sections 04 to 06 explain exactly what each of them will charge you and why. We show you these numbers up front so there are no shocks in month two.

Shopify PAID BY YOU, DIRECTLY TO SHOPIFY

Shopify is the software your shop runs on. You rent it monthly. It handles the cart, the checkout, stock counts, orders and invoices — so nothing breaks when 200 people visit at once, and you are never dependent on one developer's server.

WHAT SHOPIFY COSTS IN INDIA

SHOPIFY PLANS — INDIA PRICING, ANNUAL BILLING				
PLAN	PER MONTH	+ 18% GST	PER YEAR, ALL-IN	EXTRA FEE ON OUTSIDE GATEWAY
Basic RECOMMENDED	₹1,499	₹1,769	₹21,226	2.0%
Grow	₹5,599	₹6,607	₹79,282	1.0%
Advanced	₹22,680	₹26,762	₹3,21,149	0.6%
Plus (enterprise)	from ₹1,75,000	₹2,06,500	₹24,78,000	0.2%

Paying month-by-month instead of yearly costs roughly **25% more** — about ₹1,994 + GST = ₹2,353 a month on Basic. We recommend the annual Basic plan: it saves you about ₹7,000 in the first year and Basic comfortably handles several hundred orders a month.

THE ONE THING INDIAN SELLERS GET CAUGHT BY

Shopify charges an extra 2% on Basic because you are in India. Shopify's own payment product, Shopify Payments, is not available in India. So every Indian store must plug in an Indian gateway like Razorpay — and Shopify then adds a **2% "third-party gateway" fee** on every order that goes through its standard checkout. That is on top of what Razorpay charges. On ₹1,50,000 of monthly sales this is **₹3,000 + ₹540 GST = ₹3,540 a month.**

Most agencies never mention this. We are telling you before you sign, and we have a way around it.

How we reduce it. Shopify's 2% applies only to orders that pass through Shopify's own checkout page. Orders completed through an approved quick-checkout — such as **Razorpay Magic Checkout** — currently fall outside it. Magic Checkout costs about 0.65% + GST, roughly a third of the 2%, and it also speeds up checkout and reduces drop-off at the payment step. On ₹1,50,000 of sales that is about **₹2,390 saved every month, ₹28,700 a year.** We set this up as part of the build. To be straight with you: this is a gap in Shopify's fee rules, not a permanent guarantee, and Shopify could close it. We will tell you the day it changes.

1. Register the Shopify account **in your name**, with your email, your GSTIN and your card — so you own it outright and can claim the GST back as input credit.
2. Buy and connect your domain, and set up a professional email address on it (for example `orders@yourdomain.in`).
3. Configure India settings: INR, GST rates per product category, HSN codes, GST-compliant invoice format, delivery zones and charges that match how your own team operates, and free-delivery thresholds.
4. Build the storefront, load your 30 products, and connect Razorpay and WhatsApp.
5. Enable Razorpay Magic Checkout as the primary checkout to legally avoid the 2% fee, keeping Shopify's standard checkout as backup.
6. Hand you the login. **You hold the owner account; JTACS is added as staff.** You can remove our access any day, and the store keeps running.

05

Razorpay PAID BY YOU, DIRECTLY TO RAZORPAY

Razorpay is the payment gateway. It collects money from the patient's UPI app, card, net banking or wallet and deposits it into your bank account. Every order on your store is **prepaid** — nothing is dispatched until the money is in. There is no setup fee and no yearly fee, and Razorpay only takes a cut when a payment actually succeeds.

WHAT RAZORPAY CHARGES

RAZORPAY STANDARD RATES — INDIA, DOMESTIC BUSINESS				
PAYMENT METHOD	RAZORPAY FEE	GST @18%	YOU ACTUALLY PAY	ON A ₹1,000 ORDER
UPI — GPay, PhonePe, Paytm MOST OF YOUR ORDERS	0%	—	0%	₹0
RuPay debit cards	0%	—	0%	₹0
Debit & credit cards, net banking, wallets	2.00%	0.36%	2.36%	₹23.60
International cards (NRI patients)	3.00%	0.54%	3.54%	₹35.40
Magic Checkout add-on (optional, see Section 04)	+0.65%	+0.12%	+0.77%	₹7.70
Account opening, integration, yearly maintenance	₹0	—	₹0	₹0

UPI is free because the RBI does not permit a merchant charge on UPI. That is the single biggest cost advantage of selling in India — and it is why we will design your checkout to

push UPI first.

What this means for you in practice. In Indian health and wellness stores, roughly 70% of prepaid orders come through UPI. On ₹1,50,000 of monthly sales split 70% UPI and 30% cards, Razorpay takes: ₹1,05,000 on UPI = ₹0, and ₹45,000 on cards = ₹900 + ₹162 GST = ₹1,062. Your blended payment cost is about **0.71%** — far below the 2% headline rate people expect.

HOW WE WILL IMPLEMENT IT

1. **Open the Razorpay account in your name** and complete KYC. For an Ayurvedic products business Razorpay treats this as a regulated category, so we prepare the file properly the first time: PAN, GSTIN, bank proof or cancelled cheque, business registration, and critically your **AYUSH licence / drug licence**. A missing AYUSH certificate is the single most common reason Ayurveda merchant accounts get rejected or frozen later.
2. Install the official Razorpay app in Shopify, generate live API keys, and connect them.
3. Turn on UPI, cards, net banking, wallets and EMI on higher-value orders. **Cash on Delivery stays switched off** — every order is paid for online before your team dispatches it.
4. Run live test transactions of ₹1 across every method, confirm they appear correctly, then refund them — so we know refunds work too.
5. Set your settlement bank account and cycle. Expect **T+3 to T+5** for the first 10–15 transactions, then it settles into the standard **T+2** — money in your bank two working days after the sale.
6. Configure automatic refund handling, so a cancelled order returns the patient's money without you calling anyone.

06

WhatsApp Business PAID BY YOU, DIRECTLY TO META / PROVIDER

You asked for a WhatsApp Business account with a community people can join for updates and offers, and the ability to order through WhatsApp. That is genuinely achievable — but it needs **two WhatsApp numbers, not one**, and this is the detail most agencies get wrong and only discover after they have set it up.

The rule you must know before we start. WhatsApp has two separate products. The free **WhatsApp Business App** is the only one that can run Communities and groups. The paid **WhatsApp Business Platform (API)** is the only one that can send unlimited broadcasts and automatic order updates — but the moment a number is moved onto the API, **that number can no longer use the Business App, and loses Communities and groups entirely.**

A number cannot do both. So we set up two numbers, one for each job, both branded as your practice. Doing it this way from day one avoids a painful migration later — once a number goes to the API, moving it back means losing the number's history.

THE TWO-NUMBER SETUP WE WILL BUILD

WHAT EACH NUMBER DOES		
	NUMBER 1 — COMMUNITY	NUMBER 2 — BROADCAST & ORDERING
Product	WhatsApp Business App (free)	WhatsApp Business Platform / API
Runs on	A phone at your clinic	A web dashboard, any staff member can log in
Purpose	The patient community — an announcement group people join, with linked topic groups for Diet & Lifestyle, New Products, Q&A with the doctor	Offer campaigns to your whole list, automatic order confirmed / shipped / delivered messages, catalogue ordering, chatbot
Can hold	A Community links up to 100 groups; broadcast lists cap at 256 contacts	No limit on how many opted-in people you message
Green tick	Not available	Yes — we apply for verification
Cost	Free	Platform fee + per message — see below

Community members are invited by a join link we place on your website, on order confirmation messages, on your clinic reception desk as a QR code, and in the order itself as a printed insert. That link is how a ₹400 buyer becomes a repeat patient.

WHAT WHATSAPP CHARGES — META'S RATES FOR INDIA

PER-MESSAGE RATES EFFECTIVE 1 JANUARY 2026			
MESSAGE TYPE	USED FOR	META RATE	WITH 18% GST
Marketing	Offers, festival discounts, new product announcements, re-order reminders	₹0.8631	₹1.0185
Utility	Order confirmed, payment received, dispatched, out for delivery	₹0.1150	₹0.1357
Authentication	OTP for login or account verification	₹0.1150	₹0.1357
Service	Your replies when a patient messages you first (24-hour window)	Free	Free

Meta moved from conversation-based to **per-message** pricing on 1 July 2025, and raised India's marketing rate about 10% on 1 January 2026. Utility messages are also free if sent inside the 24-hour window after a patient messages you — we structure the flows to use that window wherever possible.

PLATFORM PROVIDER — AND WHAT IT COSTS EACH MONTH

INDIAN WHATSAPP API PROVIDERS		
PROVIDER	MONTHLY PLATFORM FEE	NOTE
AiSensy RECOMMENDED	from ₹1,500 (Pro ₹3,200)	Best value in India, free API setup and free green-tick application, unlimited team logins
Interakt	₹1,999–5,000	Charges by number of active contacts, which gets expensive as your list grows
Wati	₹2,199–4,899	Strong chatbot builder, higher price for the same core features

WORKED EXAMPLE — 1,000 COMMUNITY MEMBERS, 2 OFFER CAMPAIGNS A MONTH, 100 ORDERS	
LINE	AMOUNT (₹)
AiSensy platform fee	1,500
Marketing messages — $2,000 \times ₹0.8631$	1,726
Utility messages — $300 \text{ order updates} \times ₹0.1150$	35
Patient replies and support conversations	0
Sub-total	3,261
GST @ 18%	587
Total WhatsApp cost per month	3,848

Why this is the cheapest marketing you will ever buy. Reaching 1,000 patients costs you about ₹1,000 in marketing messages. WhatsApp messages are opened by around 90–98% of recipients, against roughly 20% for email. If just fifteen of those thousand people re-order a ₹600 medicine, that campaign returns ₹9,000 on a ₹1,000 spend. Repeat purchase is where an Ayurveda practice actually makes money — patients finish a course and need the next one — and WhatsApp is the right tool for it.

1. Set up **Number 1** on the WhatsApp Business App: business name, logo, clinic address, hours, website link, and your product catalogue inside WhatsApp.
2. Create the **Community** with an announcement group and topic groups, write the group rules and description, and design the join QR code and link.
3. Register **Number 2** on the WhatsApp Business Platform through AiSensy, complete Meta Business verification, and apply for the green tick.
4. Write and submit for Meta approval the message templates you will need: order confirmed, payment received, dispatched with tracking details, out for delivery, delivered, abandoned-cart reminder, re-order reminder and festival offer.
5. Connect the store to WhatsApp so order updates fire automatically, with no one typing a message.
6. Build the **ordering flow**: a patient messages your number, sees the catalogue, picks items, and receives a Razorpay payment link in the chat. The paid order then appears in your Shopify dashboard like any other order — one place to manage everything.
7. Set up the **opt-in mechanism** properly. Meta bans numbers that message people who did not consent. We collect consent at checkout, on the join link, and at your clinic — and record it, so your number stays safe.
8. Train your staff on the shared inbox: how to reply, assign, tag and close a conversation.

07

The complete money picture

Every rupee, in one place. Green rows are payable to JTACS. Blue rows are payable by you directly to Shopify, Razorpay and Meta — JTACS takes no commission on any of them. Delivery is not costed here: you already have that in place.

A · WHAT IT COSTS TO GET STARTED

MONTH 1 — ONE-TIME AND SETUP COSTS, ALL INCLUSIVE OF GST		
ITEM	PAID TO	AMOUNT (₹)
Website and systems build — everything in Section 02	JTACS	36,000
Domain name for 1 year (.in or .com)	REGISTRAR	1,400
Shopify Basic, 12 months prepaid	SHOPIFY	21,226
Razorpay account opening and integration	RAZORPAY	0
WhatsApp Business App and Community	META	0
WhatsApp API platform — first month	AISENSY	1,770
Total to go live		60,396

Of this, ₹36,000 comes to JTACS and ₹24,396 goes to the platforms. If you are GST-registered, roughly ₹3,700 of the platform charges is GST you can claim back as input

credit — making your true cost about ₹56,700.

B · WHAT IT COSTS TO RUN, EVERY MONTH

STEADY STATE — 100 PREPAID ORDERS A MONTH, ₹1,50,000 IN SALES, INCLUSIVE OF GST		
RUNNING COST	STANDARD SHOPIFY CHECKOUT	WITH MAGIC CHECKOUT
Shopify Basic (annual plan, per month)	1,769	1,769
Shopify third-party gateway fee — 2%	3,540	0
Razorpay (70% UPI at 0%, 30% cards at 2.36%)	1,062	1,062
Razorpay Magic Checkout — 0.65%	—	1,151
WhatsApp — platform plus messages	3,848	3,848
Total running cost per month	10,219	7,830

Setting up Magic Checkout saves about ₹2,389 a month — ₹28,668 a year. It is included in the build price at no extra charge.

Does this actually make money? At ₹1,50,000 of monthly sales on a typical 60% product margin, your gross profit is ₹90,000. Take off ₹7,830 of platform costs and you keep roughly ₹82,200 a month — from patients you never had to see in person. The one-time build of ₹36,000 pays for itself inside the first month of running at this level, and every month after that is profit. Even at a third of this volume the store covers its own costs.

Timeline — live in four weeks

Four weeks from the day the advance is received and your material is with us. Razorpay KYC and Meta verification are the two steps outside our control; we file them on day one so they run in the background.

WEEK 1 — FOUNDATION

Accounts, domain and content

Kick-off call. We collect your logo, photographs, product list and prices. Domain bought, Shopify account opened in your name, Razorpay KYC filed, Meta Business verification started, both WhatsApp numbers registered.

WEEK 2 — BUILD

Store design and catalogue

Homepage and product page designs shown to you for approval. All 30 products loaded with images, descriptions, pricing and stock. All pages written and built. You review a live preview link, not a picture.

WEEK 3 – CONNECT

Payments, order handling and WhatsApp

Razorpay and Magic Checkout connected and tested, prepaid only. Order dashboard, packing slips and dispatch workflow set up with your delivery team. WhatsApp Community created, message templates submitted to Meta, order-update automation switched on.

WEEK 4 – LAUNCH

Test, train, go live

We place real test orders end to end — pay, dispatch, track, refund. Your corrections are applied. 90-minute staff training, recorded. Store goes live. 30 days of free defect support begins.

WHAT WE NEED FROM YOU TO HIT THESE DATES

- ☐ **Business documents** — PAN, GSTIN, AYUSH / drug licence, business registration proof, cancelled cheque or bank statement.
- ☐ **Two phone numbers** for WhatsApp — one for the Community, one for the API. Neither may already be in use on a personal WhatsApp you want to keep.
- ☐ **Product list** — name, description, ingredients, dosage, MRP, weight, and how much stock you hold.
- ☐ **Photographs** of each product, and a good photograph of yourself for the About page.
- ☐ **Your logo** if you have one, and any brand colours you already use.
- ☐ **One decision-maker** available for a 30-minute call each week. Delays in approval are the only thing that moves this date.

09

Payment terms

MILESTONE SCHEDULE — JTACS BUILD FEE			
STAGE	WHEN	SHARE	AMOUNT (₹)
Advance	On acceptance of this quotation, to begin work	50%	18,000
Design approval	When you approve the store design and catalogue in week 2	25%	9,000
Go-live	On handover of all logins and completion of training	25%	9,000
Total		100%	36,000

- ☐ **How to pay.** NEFT, IMPS, UPI or bank transfer. Account details are shared on acceptance, and an invoice is issued at each milestone.
- ☐ **Third-party costs are yours, paid directly.** Shopify, Razorpay and Meta are billed to your own card or bank account, in your own name. JTACS never collects them and adds no markup. You keep the GST input credit on all of them.

- ❑ **Ownership.** On final payment, every account, the domain, the store, the designs and the content are yours outright. JTACS holds nothing back and there is no ransom over access.
- ❑ **Two rounds of revisions** on the design are included. Further rounds, or changes after design approval, are billed at ₹1,200 per hour with your written agreement first.
- ❑ **After launch.** Thirty days of free defect support is included. Beyond that, changes and additions are quoted as and when you need them — there is nothing you are signed up to pay us on an ongoing basis.
- ❑ **Validity.** This quotation holds for 30 days from the date above. Third-party rates quoted are those published by each company at the time of writing and are set by them, not by us; if any of them changes their rates, we will tell you.
- ❑ **Late payment.** Milestone payments are due within 7 days of the invoice.

Why JTACS

There are cheaper quotes available and there are more expensive ones. Here is the specific case for us.

01 One partner, not three vendors The store, the payment gateway and WhatsApp are three different companies with three different failure modes, and they all have to talk to each other and to your delivery team. Most agencies build the website and leave you to fight with the rest. We deliver it connected and working, and you have one number to call when anything breaks.	02 We told you the costs before you signed Shopify's hidden 2% India fee, and WhatsApp's two-number rule. These are the two things that ambush Indian sellers in month two, and both are in this document, in writing, before you have paid us anything. Ask any other quote you receive whether it mentions either of them.
03 We understand Ayurveda is a regulated business You are not selling t-shirts. The Drugs & Magic Remedies Act, AYUSH licensing and ASCI advertising rules govern what you may claim about your medicines. Wrong wording gets payment accounts frozen and Meta ad accounts banned. Section 11 shows you exactly where the lines are.	04 We engineer your costs down, not just your website up A UPI-first checkout takes your payment cost to near zero — a blended 0.71% instead of the 2% everyone assumes. Magic Checkout saves about ₹28,700 a year on Shopify's fee. That is real money designed into a ₹36,000 build, and it repeats every year.

05 You own everything, from day one Every account is opened in your name with your email and your card. We are added as staff, and you can remove us any day without the store stopping. No hostage logins, no proprietary platform, no lock-in. That is a promise most agencies will not make in writing.	06 Fixed price, and the scope is written down ₹36,000 is the price. Section 02 lists exactly what is in it and exactly what is not. Nothing is billed to you that you did not agree to in advance, in writing.
07 We do the paperwork, not just the code Razorpay KYC for a regulated AYUSH category, Meta Business verification, GST-compliant invoice configuration, HSN codes, the green-tick application. This is the tedious part that stalls launches for months. We handle it.	08 We train your staff and hand over properly A recorded 90-minute session on adding products, processing orders, printing labels and issuing refunds — so your clinic runs the store daily without calling us. We would rather you did not need us, and then chose to keep us anyway.
09 Built for the repeat order, not the first sale Ayurveda's economics are in the second, third and fourth purchase — a patient finishes a course and needs the next one. The WhatsApp community, re-order reminders and subscription option are designed around that, not bolted on later.	10 We are still here after launch Thirty days of free defect support, and we pick up the phone after that too. Anything further is quoted when you ask for it. You are not signed up to anything ongoing, and we would rather earn the next job than lock you into one.

Compliance — what you must have in place

Selling Ayurvedic medicines online in India is legal and straightforward, but it is regulated. These are your responsibilities, not ours — we flag them now because ignoring them is what shuts stores down. Please confirm your position on each before we begin.

- ❑ **AYUSH licence.** Ayurvedic, Siddha and Unani medicines fall under the Drugs and Cosmetics Act, 1940 and its 1945 Rules. A manufacturing licence is required if you make them; a retail licence if you only sell them. Razorpay will ask for this during KYC, and Shopify, Amazon and Meta all enforce it.
- ❑ **What you may and may not say.** The Drugs and Magic Remedies (Objectionable Advertisements) Act, 1954 prohibits advertising that a product cures a listed disease — diabetes, cancer, heart conditions and others. General wellness language is permitted; disease-cure claims are not. **This is the most common reason Ayurveda stores lose their payment gateway.** We will write your product copy on the right side of this line, and flag anything in your existing material that reads as a disease-cure claim.

- ❑ **Labelling.** Every product page must carry ingredients, net quantity, batch number, manufacturing and expiry dates, MRP inclusive of taxes, manufacturer name and address, and the licence number. We build these fields into the product template.
- ❑ **GST.** Most Ayurvedic medicines attract 12% GST; some cosmetics and wellness products attract 18%. We configure HSN codes per product and set the store to issue GST-compliant invoices automatically. Please have your chartered accountant confirm the rate for each product before we load the catalogue.
- ❑ **Meta advertising policy.** Health claims in WhatsApp templates and Meta ads are reviewed by Meta and rejected or banned if they overstate. We write templates to pass review the first time.
- ❑ **Store policies.** Shipping, returns, refunds and privacy pages are legally required for an e-commerce business and for Razorpay approval. We draft all four; please have them reviewed by your legal advisor before go-live.

To be clear about our role. JTACS builds and operates your digital systems. We are not your legal or regulatory advisor, and we do not obtain licences on your behalf. Please have your chartered accountant and legal advisor confirm licensing, GST rates and product claims. What we guarantee is that we will not build anything that knowingly puts you on the wrong side of these rules, and that we will tell you when we see a risk.

Date 27 August 2026

NOTES ON THE FIGURES

All third-party rates in this document are the rates published by those companies as of August 2026 and are subject to change by them. GST at 18% applies to the Shopify, Razorpay and WhatsApp charges shown; Ayurvedic medicines themselves are typically 12%. The JTACS fee of ₹36,000 is quoted flat, with no tax added. Worked examples assume 100 prepaid orders a month at an average order value of ₹1,500 and a 70:30 UPI-to-card split — your actual numbers will vary. Delivery costs are excluded throughout, since you handle delivery yourself. Sources consulted:
