Malnad produce — coffee, spices and estate goods

SUBJECT

Online Store & WhatsApp Channel

An online shop to sell your Malnad produce, with Razorpay for payments and a WhatsApp Business community for offers and ordering. Deliveries are handled by your own team.

01

In plain words, what you are buying

Read only this page if you read nothing else. Everything after it is the detail behind these five points.

✓ Your own online shop.

A proper website where customers see your coffee and spices, pick the pack size they want, and pay — on their phone, in two minutes. It is yours, in your name.

✓ Money reaches your bank directly.

Payments come in by UPI, card, net banking or wallet through Razorpay and land in your bank account. JTACS never touches your money.

✓ Every order is paid for before it leaves you.

No Cash on Delivery. Your team sees a paid order with the name, address and items in one place, packs it, and hands it to your own delivery arrangement.

✓ A WhatsApp community for your customers.

A group they join for harvest updates and offers, your product catalogue inside WhatsApp, and the ability to order through a chat — plus automatic messages when an order is confirmed and dispatched.

✓ One bill from us, and clear information on everyone else's bills.

JTACS charges you a one-time fee to build all of this. Shopify, Razorpay and WhatsApp charge you separately, directly, at their own published rates.

We add no commission on top of them.

The short version of the money. JTACS charges **₹38,000**, one time, to build and launch everything. There is no tax added on top of that and nothing further to pay us for the build. To start the shop you will also pay about **₹22,600** to Shopify and the domain provider in the first month. After that, expect around **₹6,400 per month** in running costs at 200 orders a month, paid directly to those companies. Section 07 shows every rupee.

Scope of work — what JTACS will build

Fixed scope, fixed price. Anything outside this list is quoted separately before we start it, never billed as a surprise.

A · THE ONLINE SHOP

- ❑ **Shopify store setup** on your own domain (for example `malnadestate.in`), configured for India: INR pricing, GST rates and HSN codes per product, GST-compliant invoices, Indian address formats and pin-code based delivery charges.
- ❑ **Custom-designed storefront** — homepage, shop, product pages, Our Estate, Contact, plus the legally required pages (Terms, Privacy, Shipping Policy, Refund & Return Policy).
- ❑ **Products with real pack sizes.** One coffee sold as 250 g / 500 g / 1 kg, and as beans / coarse / fine grind — each with its own price and stock count, chosen on a single page. The same for spices by weight.
- ❑ **Product catalogue loaded — up to 30 products** with photographs, descriptions, and every declaration the law requires on a food listing (Section 11).
- ❑ **Collections** — Coffee, Spices, Honey & Estate Goods, Gift Boxes, and seasonal sets for harvest and festivals.
- ❑ **Mobile-first design.** Over 80% of your customers will open the site on a phone. It is designed for the phone first and the laptop second.
- ❑ **Search, filters and related-product suggestions** so a customer looking for one item discovers three more.

B · PAYMENTS, ORDER HANDLING AND WHATSAPP

- ❑ **Razorpay payment gateway** — account opening support, KYC document preparation, integration, live test transactions, and settlement to your bank account. **Prepaid only** — Cash on Delivery is not offered.
- ❑ **Order handling for your delivery team** — one dashboard of paid orders with name, address, phone and items; printable packing slips; a dispatch button; and a field for your tracking or docket number so the customer is notified automatically. Built to fit the delivery arrangement you already have.
- ❑ **WhatsApp Business community setup** — verified business profile, your catalogue inside WhatsApp, the community itself, join links and QR codes, and order-update messages. Full detail in Section 06.

- ❑ **Google Analytics and Search Console** connected, so you can see how many people visited and what they bought.
- ❑ **Basic SEO** — page titles, descriptions, product data and a Google Business Profile, so someone searching for Malnad coffee online can find you.
- ❑ **End-to-end testing.** We place real test orders ourselves — pay, dispatch, refund — before you go live.
- ❑ **One training session (90 minutes)** for you and your staff: adding a product, seeing an order, printing a packing slip, issuing a refund. Recorded, so you can watch it again.
- ❑ **30 days of free defect support** after go-live. If something we built does not work, we fix it at no charge.

D · NOT INCLUDED IN THIS PRICE

Product photography and videography · logo and brand identity design (if you do not have one) · content writing beyond your supplied product text · paid advertising and its ad spend · courier and delivery arrangements, which you handle · mobile apps for Android or iOS · subscription and repeat-delivery ordering · wholesale or dealer pricing · marketplace listings on Amazon or Flipkart · regional-language versions of the store. Each of these is available and quoted separately whenever you want it.

JTACS charges PAYABLE TO US

This is the one-time fee for building, integrating, testing and launching everything described in Section 02. It is the only invoice you will receive from JTACS for the build.

PROFORMA INVOICE — ONE-TIME WEBSITE AND SYSTEMS BUILD		
#	DESCRIPTION OF SERVICE	AMOUNT (₹)
1	Store design & development — Shopify setup, custom storefront design, up to 8 pages, mobile-first build, domain and email configuration	15,000
2	Product catalogue setup — up to 30 products with pack-size and grind options, images, descriptions, pricing, stock, collections, search and filters	7,000
3	Razorpay payment integration — account and KYC support, gateway integration, UPI / cards / net banking / wallets, Magic Checkout, live testing, settlement setup	6,000
4	WhatsApp Business & community setup — verified profile, catalogue, community structure, join links and QR codes, broadcast setup, order-update message templates	6,000
5	Order management & dispatch workflow — order dashboard for your team, packing slips, dispatch marking, tracking-number entry, returns and refund process	2,500
6	Compliance, launch & training — FSSAI and labelling fields, GST and HSN configuration, legal pages, SEO basics, analytics, end-to-end testing, go-live and staff training	1,500
Total payable to JTACS		38,000

Rupees Thirty-Eight Thousand Only. This is a flat fee with no tax added on top and nothing further to pay for the build.

Important — what this ₹38,000 does not cover. Shopify's subscription, Razorpay's transaction fees and WhatsApp message costs are **not** included here and are **not** billed by JTACS. You pay those companies directly, from your own account, at their published rates. Sections 04 to 06 explain exactly what each of them will charge you and why. We show you these numbers up front so there are no shocks in month two.

04

Shopify PAID BY YOU, DIRECTLY TO SHOPIFY

Shopify is the software your shop runs on. You rent it monthly. It handles the cart, the checkout, stock counts, orders and invoices — so nothing breaks when 200 people visit at once, and you are never dependent on one developer's server.

WHAT SHOPIFY COSTS IN INDIA

SHOPIFY PLANS — INDIA PRICING, ANNUAL BILLING				
PLAN	PER MONTH	+ 18% GST	PER YEAR, ALL-IN	EXTRA FEE ON OUTSIDE GATEWAY
Basic RECOMMENDED	₹1,499	₹1,769	₹21,226	2.0%
Grow	₹5,599	₹6,607	₹79,282	1.0%
Advanced	₹22,680	₹26,762	₹3,21,149	0.6%
Plus (enterprise)	from ₹1,75,000	₹2,06,500	₹24,78,000	0.2%

Paying month-by-month instead of yearly costs roughly **25% more** — about ₹1,994 + GST = ₹2,353 a month on Basic. We recommend the annual Basic plan: it saves you about ₹7,000 in the first year and Basic comfortably handles several hundred orders a month.

THE ONE THING INDIAN SELLERS GET CAUGHT BY

Shopify charges an extra 2% on Basic because you are in India. Shopify's own payment product, Shopify Payments, is not available in India. So every Indian store must plug in an Indian gateway like Razorpay — and Shopify then adds a **2% "third-party gateway" fee** on every order that goes through its standard checkout. That is on top of what Razorpay charges. On ₹1,50,000 of monthly sales this is **₹3,000 + ₹540 GST = ₹3,540 a month.**

Most agencies never mention this. We are telling you before you sign, and we have a way around it.

How we reduce it. Shopify's 2% applies only to orders that pass through Shopify's own checkout page. Orders completed through an approved quick-checkout — such as **Razorpay Magic Checkout** — currently fall outside it. Magic Checkout costs about 0.65% + GST, roughly a third of the 2%, and it also speeds up checkout and reduces drop-off at the payment step. On ₹1,50,000 of sales that is about **₹2,390 saved every month, ₹28,700 a year.** We set this up as part of the build. To be straight with you: this is a gap in Shopify's fee rules, not a permanent guarantee, and Shopify could close it. We will tell you the day it changes.

1. Register the Shopify account **in your name**, with your email, your GSTIN and your card — so you own it outright and can claim the GST back as input credit.
2. Buy and connect your domain, and set up a professional email address on it (for example `orders@yourdomain.in`).
3. Configure India settings: INR, GST rate and HSN code per product, GST-compliant invoice format, pin-code delivery zones and charges that match how your own team operates, and free-delivery thresholds.
4. Build the storefront, load your 30 products with their pack sizes, and connect Razorpay and WhatsApp.
5. Enable Razorpay Magic Checkout as the primary checkout to legally avoid the 2% fee, keeping Shopify's standard checkout as backup.
6. Hand you the login. **You hold the owner account; JTACS is added as staff.** You can remove our access any day, and the store keeps running.

05

Razorpay PAID BY YOU, DIRECTLY TO RAZORPAY

Razorpay is the payment gateway. It collects money from the customer's UPI app, card, net banking or wallet and deposits it into your bank account. Every order is prepaid — nothing is dispatched until the money is in. There is no setup fee and no yearly fee, and Razorpay only takes a cut when a payment actually succeeds.

WHAT RAZORPAY CHARGES

RAZORPAY STANDARD RATES — INDIA, DOMESTIC BUSINESS				
PAYMENT METHOD	RAZORPAY FEE	GST @18%	YOU ACTUALLY PAY	ON A ₹1,000 ORDER
UPI — GPay, PhonePe, Paytm MOST OF YOUR ORDERS	0%	—	0%	₹0
RuPay debit cards	0%	—	0%	₹0
Debit & credit cards, net banking, wallets	2.00%	0.36%	2.36%	₹23.60
International cards (customers abroad)	3.00%	0.54%	3.54%	₹35.40
Magic Checkout add-on (recommended, see Section 04)	+0.65%	+0.12%	+0.77%	₹7.70
Account opening, integration, yearly maintenance	₹0	—	₹0	₹0

UPI is free because the RBI does not permit a merchant charge on UPI. That is the single biggest cost advantage of selling in India — and it is why we will design your checkout to push UPI first.

What this means for you in practice. In Indian food and produce stores, roughly 70% of prepaid orders come through UPI. On **₹1,50,000** of monthly sales split 70% UPI and 30% cards, Razorpay takes: ₹1,05,000 on UPI = **₹0**, and ₹45,000 on cards = ₹900 + ₹162 GST = **₹1,062**. Your blended payment cost is about **0.71%** — far below the 2% headline rate people expect.

HOW WE WILL IMPLEMENT IT

1. **Open the Razorpay account in your name** and complete KYC. For a packaged food business we prepare the file properly the first time: PAN, GSTIN, bank proof or cancelled cheque, business registration, and your **FSSAI licence**. A missing or mismatched FSSAI licence is the most common reason food merchant accounts are held up or frozen later.
2. Install the official Razorpay app in Shopify, generate live API keys, and connect them.
3. Turn on UPI, cards, net banking, wallets and EMI on higher-value orders. **Cash on Delivery stays switched off** — every order is paid for online before your team dispatches it.
4. Run live test transactions of ₹1 across every method, confirm they appear correctly, then refund them — so we know refunds work too.
5. Set your settlement bank account and cycle. Expect **T+3 to T+5** for the first 10–15 transactions, then it settles into the standard **T+2** — money in your bank two working days after the sale.
6. Configure automatic refund handling, so a cancelled order returns the customer's money without you calling anyone.

06

WhatsApp Business & community PAID BY YOU, DIRECTLY TO META

You want a community customers can join for offers, and the ability to take orders through WhatsApp. The community itself is free. Here is exactly how it works, and what the optional paid upgrade adds.

The rule you must know before we start. WhatsApp has two separate products. The free **WhatsApp Business App** is the only one that can run a Community. The paid **WhatsApp Business Platform (API)** is the only one that can broadcast to an unlimited list and send automatic order updates — and the moment a number is moved onto the API, **that number can no longer use the Business App, and loses Communities entirely.**

A number cannot do both. So if you want both, we set up two numbers, one for each job, both branded as your business. Doing it this way from day one avoids a painful migration later — once a number goes to the API, moving it back means losing the number's history.

WHAT EACH NUMBER DOES		
	NUMBER 1 — COMMUNITY INCLUDED	NUMBER 2 — BROADCAST & ORDERING OPTIONAL
Product	WhatsApp Business App	WhatsApp Business Platform / API
Runs on	A phone at your estate or office	A web dashboard, any staff member can log in
Purpose	The customer community — an announcement group people join, with linked topic groups for Harvest Updates, Offers, and Recipes & Brewing. Your catalogue sits inside WhatsApp so people can browse and message you to order.	Offer campaigns to your whole list, automatic order confirmed / dispatched / delivered messages, ordering through a chat form, chatbot
Can reach	A Community links up to 100 groups; broadcast lists cap at 256 contacts	No limit on how many opted-in people you message
Green tick	Not available	Yes — we apply for verification
Cost	Free	Platform fee + per message — see below

Community members are invited by a join link we place on your website, on order confirmation messages, at your estate shop as a QR code, and in the parcel itself as a printed insert. That link is how a one-time buyer becomes a repeat customer — which is where a produce business actually makes its money.

Start free, upgrade when the list outgrows it. The community, the catalogue and the verified profile cost you **nothing** — they run on the free Business App, and that is what the setup fee in Section 03 covers. The 256-contact broadcast cap is the moment to add the paid API: once you are sending offers to more than 256 people, the free app makes you send the same message repeatedly by hand. Most estates reach that within a season.

IF AND WHEN YOU ADD THE PAID API

META PER-MESSAGE RATES FOR INDIA, EFFECTIVE 1 JANUARY 2026			
MESSAGE TYPE	USED FOR	META RATE	WITH 18% GST
Marketing	Offers, festival discounts, new harvest announcements, re-order reminders	₹0.8631	₹1.0185
Utility	Order confirmed, payment received, dispatched, out for delivery	₹0.1150	₹0.1357
Authentication	OTP for login or account verification	₹0.1150	₹0.1357
Service	Your replies when a customer messages you first (24-hour window)	Free	Free

A platform provider is also needed to use the API. **AiSensy** from ₹1,500 a month is the best value in India and includes free API setup and a free green-tick application; Interakt

is ₹1,999–5,000 and charges by active contacts; Wati is ₹2,199–4,899.

WORKED EXAMPLE — 1,000 COMMUNITY MEMBERS, 2 OFFER CAMPAIGNS A MONTH, 200 ORDERS	
LINE	AMOUNT (₹)
AiSensy platform fee	1,500
Marketing messages — $2,000 \times ₹0.8631$	1,726
Utility messages — $300 \text{ order updates} \times ₹0.1150$	35
Customer replies and support conversations	0
Sub-total	3,261
GST @ 18%	587
Total WhatsApp cost per month, if you add the API	3,848

Why this is the cheapest marketing you will ever buy. Reaching 1,000 customers costs about ₹1,000 in marketing messages. WhatsApp messages are opened by around 90–98% of recipients, against roughly 20% for email. If just fifteen of those thousand people re-order a ₹600 pack of coffee, that campaign returns ₹9,000 on a ₹1,000 spend. Repeat purchase is where a produce business makes its money — people finish a packet and need the next one — and WhatsApp is the right tool for it.

HOW WE WILL IMPLEMENT IT

1. Set up **Number 1** on the WhatsApp Business App: business name, logo, address, hours, website link, and your product catalogue inside WhatsApp.
2. Create the **Community** with an announcement group and topic groups, write the group rules and description, and design the join QR code and link.
3. Place join links across the website, the order confirmation page, and a printed parcel insert we design for you.
4. Set up **broadcast lists and a message calendar** on the free app, and train your staff to run a campaign themselves.
5. Write the message templates you will need: order confirmed, payment received, dispatched with tracking, delivered, re-order reminder and festival offer.
6. Set up the **opt-in mechanism** properly. Meta bans numbers that message people who did not consent. We collect consent at checkout and on the join link, and record it, so your number stays safe.
7. **If you choose the paid API**, we also register Number 2, complete Meta business verification, apply for the green tick, submit templates for approval, and connect the store so order updates fire automatically.

The complete money picture

Every rupee, in one place. Green rows are payable to JTACS. Blue rows are payable by you directly to Shopify, Razorpay and Meta — JTACS takes no commission on

any of them. Delivery is not costed here: you already have that in place.

A · WHAT IT COSTS TO GET STARTED

MONTH 1 — ONE-TIME AND SETUP COSTS, ALL INCLUSIVE OF GST		
ITEM	PAID TO	AMOUNT (₹)
Website, WhatsApp and systems build — everything in Section 02	JTACS	38,000
Domain name for 1 year (.in or .com)	REGISTRAR	1,400
Shopify Basic, 12 months prepaid	SHOPIFY	21,226
Razorpay account opening and integration	RAZORPAY	0
WhatsApp Business App, catalogue and community	META	0
Total to go live		60,626
WhatsApp API first month (optional, Section 06)	AISENSY	1,770
Total if you add the WhatsApp API from day one		62,396

Of this, ₹38,000 comes to JTACS and ₹22,626 goes to the platforms. If you are GST-registered, roughly ₹3,450 of the platform charges is GST you can claim back as input credit — making your true cost about ₹57,200.

B · WHAT IT COSTS TO RUN, EVERY MONTH

STEADY STATE — 200 PREPAID ORDERS A MONTH, ₹1,50,000 IN SALES, INCLUSIVE OF GST		
RUNNING COST	STANDARD SHOPIFY CHECKOUT	WITH MAGIC CHECKOUT
Shopify Basic (annual plan, per month)	1,769	1,769
Shopify third-party gateway fee — 2%	3,540	0
Razorpay (70% UPI at 0%, 30% cards at 2.36%)	1,062	1,062
Razorpay Magic Checkout — 0.65%	—	1,151
WhatsApp community (free Business App)	0	0
Running cost per month	6,371	3,982
WhatsApp API (optional — platform plus messages)	3,848	3,848
With the WhatsApp API added	10,219	7,830

Setting up Magic Checkout saves about ₹2,389 a month — ₹28,668 a year. It is included in the build price at no extra charge.

Does this actually make money? At ₹1,50,000 of monthly sales on a 50% product margin, your gross profit is ₹75,000. Take off ₹3,982 of platform costs and you keep roughly **₹71,000 a month** — from customers who never had to visit the estate. The one-time build of ₹38,000 pays for itself inside the first month of running at this level, and every month after that is profit. Even at a third of this volume the shop comfortably covers its own costs.

08

Timeline — live in four weeks

Four weeks from the day the advance is received and your material is with us. Razorpay KYC is the one step outside our control; we file it on day one so it runs in the background.

WEEK 1 — FOUNDATION

Accounts, domain and content

Kick-off call. We collect your logo, photographs, product list and prices. Domain bought, Shopify account opened in your name, Razorpay KYC filed with your FSSAI licence, WhatsApp Business number registered.

WEEK 2 — BUILD

Store design and catalogue

Homepage and product page designs shown to you for approval. All 30 products loaded with pack sizes, images, descriptions, prices, stock and every required declaration. All pages written and built. You review a live preview link, not a picture.

WEEK 3 — CONNECT

Payments, order handling and WhatsApp

Razorpay and Magic Checkout connected and tested, prepaid only. Order dashboard, packing slips and dispatch workflow set up with your team. WhatsApp community created, catalogue loaded, join links and QR codes produced.

WEEK 4 — LAUNCH

Test, train, go live

We place real test orders end to end — pay, dispatch, refund. Your corrections are applied. 90-minute staff training, recorded. Store goes live. 30 days of free defect support begins.

WHAT WE NEED FROM YOU TO HIT THESE DATES

- ☐ **Business documents** — PAN, GSTIN, FSSAI licence, business registration proof, cancelled cheque or bank statement.
- ☐ **Product list** — name, description, pack sizes, price per size, weight, stock, and the label declarations listed in Section 11.
- ☐ **Photographs** of each product, plus estate and harvest images for the story pages. Good photography is what sells produce online.

- ❑ **A phone number** for WhatsApp Business, not currently in use on a personal WhatsApp you want to keep.
- ❑ **Your logo** if you have one, and any brand colours you already use.
- ❑ **One decision-maker** available for a 30-minute call each week. Delays in approval are the only thing that moves this date.

09

Payment terms

MILESTONE SCHEDULE — JTACS BUILD FEE			
STAGE	WHEN	SHARE	AMOUNT (₹)
Advance	On acceptance of this quotation, to begin work	50%	19,000
Design approval	When you approve the store design and catalogue in week 2	25%	9,500
Go-live	On handover of all logins and completion of training	25%	9,500
Total		100%	38,000

- ❑ **How to pay.** NEFT, IMPS, UPI or bank transfer. Account details are shared on acceptance, and an invoice is issued at each milestone.
- ❑ **Third-party costs are yours, paid directly.** Shopify, Razorpay and Meta are billed to your own card or bank account, in your own name. JTACS never collects them and adds no markup. You keep the GST input credit on all of them.
- ❑ **Ownership.** On final payment, every account, the domain, the store, the designs and the content are yours outright. JTACS holds nothing back and there is no ransom over access.
- ❑ **Two rounds of revisions** on the design are included. Further rounds, or changes after design approval, are billed at ₹1,200 per hour with your written agreement first.
- ❑ **After launch.** Thirty days of free defect support is included. Beyond that, changes and additions are quoted as and when you need them — there is nothing you are signed up to pay us on an ongoing basis.
- ❑ **Validity.** This quotation holds for 30 days from the date above. Third-party rates quoted are those published by each company at the time of writing and are set by them, not by us; if any of them changes their rates, we will tell you.
- ❑ **Late payment.** Milestone payments are due within 7 days of the invoice.

10

Why JTACS

There are cheaper quotes available and there are more expensive ones. Here is the specific case for us.

01

One partner, not three vendors

The store, the payment gateway and WhatsApp are three different companies with three different failure modes, and they all have to talk to each other and to your delivery team. Most agencies build the website and leave you to fight with the rest. We deliver it connected and working, and you have one number to call when anything breaks.

02

We told you the costs before you signed

Shopify's hidden 2% India fee, and WhatsApp's two-number rule. These are the two things that ambush Indian sellers in month two, and both are in this document, in writing, before you have paid us anything. Ask any other quote you receive whether it mentions either of them.

03

We understand packaged food is regulated

You are not selling t-shirts. FSSAI licensing and the Legal Metrology packaging rules govern what must appear on every listing, and the penalties are assessed per package. Section 11 shows exactly what the law requires, and we build those fields into your product pages so nothing goes live incomplete.

04

We engineer your costs down, not just your website up

A UPI-first checkout takes your payment cost to near zero — a blended 0.71% instead of the 2% everyone assumes. Magic Checkout saves about ₹28,700 a year on Shopify's fee. That is real money designed into a ₹38,000 build, and it repeats every year.

05

You own everything, from day one

Every account is opened in your name with your email and your card. We are added as staff, and you can remove us any day without the store stopping. No hostage logins, no proprietary platform, no lock-in. That is a promise most agencies will not make in writing.

06

Fixed price, and the scope is written down

₹38,000 is the price. Section 02 lists exactly what is in it and exactly what is not. Nothing is billed to you that you did not agree to in advance, in writing.

07

We do the paperwork, not just the code

Razorpay KYC with your FSSAI licence attached correctly, GST-compliant invoice configuration, HSN codes per product, WhatsApp business profile and catalogue approval. This is the tedious part that stalls launches for months. We handle it.

08

We train your staff and hand over properly

A recorded 90-minute session on adding products, processing orders, printing packing slips and issuing refunds — so your team runs the shop daily without calling us. We would rather you did not need us, and then chose to keep us anyway.

09

Built for the repeat order, not the first sale

Coffee and spices are finished and bought again. That is the whole economics of your business. The WhatsApp community, the re-order reminders and the catalogue inside WhatsApp are designed around that from the start, not bolted on later.

10

We are still here after launch

Thirty days of free defect support, and we pick up the phone after that too. Anything further is quoted when you ask for it. You are not signed up to anything ongoing, and we would rather earn the next job than lock you into one.

11

Compliance — what must appear on every listing

You hold the licences. Our job is to make sure the website does not quietly put you in breach of them. These are your responsibilities, not ours — we build the fields, you supply the facts.

Built into the product page, not left to memory. Every declaration below becomes a required field on the product record. A product with any of them missing cannot be published to the storefront — the store will not let it go live incomplete.

REQUIRED ON EVERY FOOD LISTING

DECLARATION	WHY
Net quantity	The Legal Metrology (Packaged Commodities) Rules, as amended in February 2026, which specifically tightened what an online listing must display — country of origin in particular. Penalties are assessed per package , so one non-compliant listing across a large consignment adds up quickly.
Retail sale price, inclusive of all taxes	
Name and address of the manufacturer or packer	
Date of manufacture or packing	
Best before / use by	
Country of origin	
Consumer care contact	
FSSAI licence number	Displayed on listings and in the site footer, as required of a food business selling online.
HSN code and GST rate per product	Roasted and ground coffee and most whole or ground spices are 5% (HSN 0901 and 0904–0910). Value-added or mixed blends can attract 12%. Set per product so every invoice is correct at source.

ALSO HANDLED

- ❑ **GST invoices** raised automatically with a sequential, unbroken number series per financial year.
- ❑ **Monthly GST and HSN export** for your accountant.
- ❑ **Store policy pages** — shipping, returns, refunds, privacy and terms. We draft all five; please have them reviewed before go-live.
- ❑ **WhatsApp and advertising claims.** Health and wellness claims about food are reviewed by Meta and rejected or banned if overstated. We write your product copy and message templates to stay on the right side of that line.

To be clear about our role. JTACS builds and operates your digital systems. We are not your legal, food-safety or tax advisor, and we do not verify the accuracy of the label data you supply — the store enforces that the fields are *filled*, not that they are *correct*. Please have your chartered accountant and legal advisor confirm licence validity, GST rates and product claims.

NOTES ON THE FIGURES

All third-party rates in this document are the rates published by those companies as of September 2026 and are subject to change by them. GST at 18% applies to the Shopify, Razorpay and WhatsApp charges shown; coffee and most spices themselves are typically 5%. The JTACS fee of ₹38,000 is quoted flat, with no tax added. Worked examples assume 200 prepaid orders a month at an average order value of ₹750 and a 70:30 UPI-to-card split — your actual numbers will vary. Delivery costs are excluded throughout, since you handle delivery yourself. Regulatory references are provided for context and are not legal advice. Sources consulted:
